SCHEDULE – Behaviour at the Beach – Monday 10 June through Friday 14 June 2024:

	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday
7.00-8.00a		BREAKFAST  – Please come on time to the first breakfast where you can start to meet people – Intros start at 7.30A	BREAKFAST	BREAKFAST	BREAKFAST	BREAKFAST
8.00A- 10.00A		Lectures Dr. Karen Overall  Real cases – Listening and using a standardized history: Recognizing important patterns  This lecture will use real dog and cat cases to work through the histories and videos to see important patterns of behaviour emerge.	Lectures Dr. Karen Overall  Real patients need real drugs  This lecture will focus on brief histories and videos of real cases with an emphasis on drug choice, a review of drug mechanism, and the rules for use and expectation.	Lectures Dr. Karen Overall  Real cases involving canine fear and aggression – understanding the drivers and how they dictate treatment.  This lecture focuses on actual cases involving aggression and those involving some aspect of fear. Histories and videos of patients will be reviewed to help us understand the etiology and how myth and misunderstanding hurts us and our patients.	Lectures Dr. Karen Overall  Real patients need adaptive and truly collaborative care  This lecture will focus on data collected during a study on changing fear during veterinary exams. Emphasis will be on truly adaptive, collaborative interactions with dogs and cats, and how we can encourage and teach these. Emergent data will be discussed.	Lectures Dr. Karen Overall  Real patients need real behavioural mod: Understanding and meeting individual dogs' needs by watching and interacting with them  This lecture focuses on case- based examples combining what type of change clients want with what the dog or cat is telling them they need. This is a very different approach that focus on brain region, desired outcome, and cognitive behavioural approaches for non-verbal species.
